Recent precipitation assisted today's efforts and the majority of the line is looking good. Firefighters will use direct attack on the east flank 7/2 and concentrate on known areas of heat near the perimeter. Main concerns are heat along the east flank, and the NW side, especially if a drying trend persists. Once the fire is demobed, it will need to be monitored as recent precipitation could easily conceal hot areas which could re-emerge later on. Midnight Sun IHC was demobed today.
